# SENIOR SCHOOL CERTIFICATE EXAMINATION MARCH-2013

# MARKING SCHEME – ECONOMICS (*DELHI*) SET-3

#### **Expected Answers / Value Points**

#### **GENERAL INSTRUCTIONS:**

- Please examine each part of a question carefully and allocate the marks allotted for the part as given in the marking scheme below. TOTAL MARKS FOR ANY ANSWER MAY BE PUT IN A CIRCLE ON THE LEFT SIDE WHERE THE ANSWER ENDS.
- 2. Expected suggested answers have been given in the Marking Scheme. To evaluate the answers the value points indicated in the marking scheme be followed.
- 3. For questions asking the candidate to explain or define, the detailed explanations and definitions have been indicated alongwith the value points.
- 4. For mere arithmetical errors, there should be minimal deduction. Only ½ mark be deducted for such an error.
- 5. Wherever only two / three or a "given" number of examples / factors / points are expected only the first two / three or expected number should be read. The rest are irrelevant and must not be examined.
- 6. There should be no effort at "moderation" of the marks by the evaluating teachers. The actual total marks obtained by the candidate may be of no concern to the evaluators.
- 7. Higher order thinking ability questions are assessing student's understanding / analytical ability.
- 8. The Examiners should acquaint themselves with the guidelines given in the Guidelines for Spot Evaluation before starting the actual evaluation.
- 9. Every Examiner should stay upto sufficiently reasonable time normally 5-6 hours everyday and evaluate 20-25 answer books and should devote minimum 15-20 minutes to evaluate each answer book.

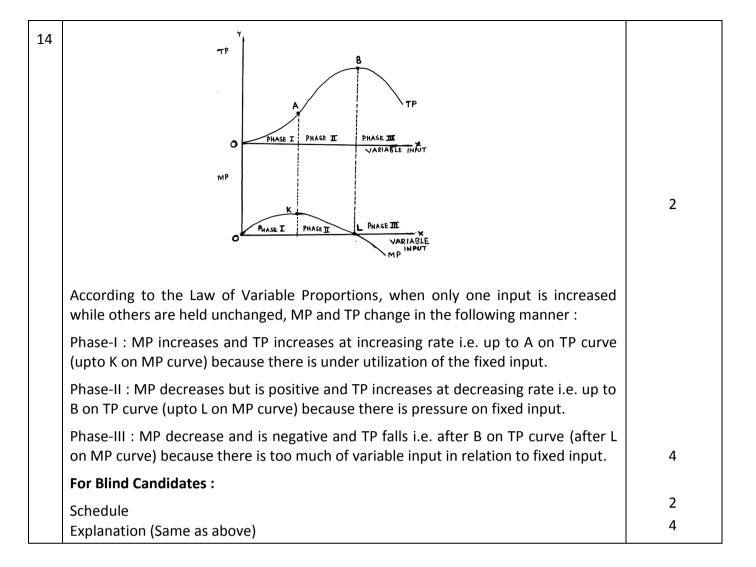

Every Examiner should acquaint himself / herself with the marking schemes of all the sets.

<u>General Note</u>: In case of numerical question no mark is to be given if only the final answer is given.

А3		Expected A	Answer / Value Points	Distribution of Marks
			SECTION-A	
1	Fixed Cost : rent, inter	est etc. (any c	one)	1/2
	<u>Variable Cost</u> : Expend	liture or raw n	naterials etc (any one)	1/2
2	Perfect competition.			1
3	Market demand is the during a period.	e sum total of	f demand by all the buyers of a good at a price	1
4	Addition to total cost	on producing	one more unit.	1
5	When the percentage percentage change (fa		e, fall) in quantity demanded is less than the e.	1
6	and more units of a go on falling as is shown i	ood, marginal	ility states that as a consumer consumes more utility from each successive unit consumed goes ag schedule.  Marginal Utility  10	1
	2 3 4	18 24 28	8 6 4	2
			<u>OR</u>	
	The two conditions are	e:		
		= -	price is same in case of all the goods consumed. nes only two goods X and Y, then	2
	(2) Marginal utility h	nas a tendency	to fall as more and more units are consumed	1
7	When with increase (decreases),	•	income of the buyer, the demand for the good alled an inferior good.	1½
	When with increase (increases),		income of the buyer, the demand for the good alled normal good.	1½

	O P' Good X	
	Production below the potential means that total production in the economy is somewhere below the production possibility curve PP', for example at point U in the diagram.	1
	When government starts employment generation schemes, and since the below potential production is due to unemployment, the economy moves forward in its attempt to remove unemployment and reach the potential. The movement forward is towards the PP' curve.	2
	(Any other individual response with suitable justification should also be accepted even if there is no reference to the text)	2
	For Blind Candidates	1
	Schedule	3
	Explanation (same as above)	
	(Any other individual response with suitable justification should also be accepted even if there is no reference to the text)	
12	A producer (firm) is said to be in equilibrium when the firm is producing that quantity of output which gives the firm maximum profit.	1
	For a firm to be in equilibrium, two conditions must be fulfilled. First, and the necessary condition is that firm's marginal cost equals marginal revenue. Second, alongwith the first condition is that MC must be greater than MR beyond the level of output at which MC=MR. Therefore fulfillment of the first condition alone does not ensure maximum profits. It is possible that MC=MR condition many be fulfilled at more than one output levels, but only that output level beyond which MC > MR	
	is the maximum profits output level.	3
13	$E_P = \frac{\text{Percentage change in demand}}{\text{Percentage change in price}}$	1½
	$(-)0.4 = \frac{\text{Percentage change in demand}}{5}$	1½
	Percentage change in demand $= -0.4 \times 5 = -2$	
	i.e. demand falls by 2 percent	1
	(No marks if only the final answer is given)	
1 I	OR	
		1
	Stating any two relevant factors clearly, like number of substitutes, number of uses of the good, income level of the consumer or any other. (Any two)	½×2

15	There are two conditions :	
	(i) MRS = Ratio of prices	1
	(ii) MRS continuously falls	1
	Explanation:	
	(i) Let the two goods be X and Y. The first condition for consumer's equal that MRS = Px/Py. Now suppose MRS is greater than Px/Py. It means consumer is willing to pay more for X than the price prevailing in the manner result the consumer buys more of X. This leads to fall in MRS. MRS continuitil it becomes equal to the ratio of prices and the equilibrium is established.	s that the arket. As a nues to fall
	(Or, alternatively in terms of when MRS < Px/Py)	3
	(ii) Unless MRS continuously falls, the equilibrium cannot be established.	1
	<u>OR</u>	
	(i) Other goods are of two types: Substitutes and Complements. Wh a substitute good falls, the given good becomes relatively dearer. its demand falls.	•
	When price of a complementary good falls (rises) the deman complementary good rises (falls) and so the demand for the given (falls) because both the goods are used jointly.	
	(ii) When the consumer treats a good as a <u>normal good</u> , rise (fall) leads to rise (fall) in its demand.	in income 1½
	When the consumer treats a good as an inferior good, rise (fall) leads to fall (rise) in its demand.	in income 1½
16	(i) False. A monopolist can sell more quantity only by lowering because the monopolist controls only the supply and not the demanda	•
	(ii) True, because when the prevailing market price is higher equilibrium price there will be excess supply, and since the sellers able to sell all they want to sell, there will be competition among s	will not be
	(No marks to be given for simply stating true or false unless accompar relevant reason.)	nied by the
	SECTION-B	
17	Excise duty, sales tax, etc. (any two)	½×2
18	Foreign direct investment raises the supply of foreign exchange downward influence on the price of foreign exchange.	leading to 1
19	Any one example like smoke out of chimneys of factories, release of conwater into river, traffic jams or any other (any one)	ntaminated 1
	(Any other individual response with suitable justification should also be even if there is no reference to the text)	e accepted
20	Government budget is a statement of estimated receipts and expenditures of government during a year.	estimated 1
		Pg 6

21	Deposits which can be withdrawn by writing cheque are called demand deposits.	1
22	Expenditure that neither creates an asset nor reduces a liability is called <u>revenue</u> <u>expenditure</u> .	1
	Example : Payment of salaries etc.	1/2
	Expenditure that either creates an asset or reduces a liability is called <u>Capital</u> <u>expenditure</u> .	1
	Example : Construction of roads etc.	1/2
	<u>OR</u>	
	Excess of revenue expenditure over revenue receipts is called <u>revenue deficit</u> whereas the excess of total expenditure over total receipts excluding borrowings is called <u>fiscal deficit</u> .	3
23	Appreciation of domestic currency means fall in exchange rate, i.e. price of foreign currency. It means that the importers have now to pay less domestic currency to buy one unit worth of foreign currency goods from abroad. Imports become cheaper. This raises demand for imports.	3
24	Exports of goods less imports of goods refers to <u>balance of trade</u> . Adding excess of inflows over the outflows on account of invisibles to the balance of trade is called <u>balance on current account</u> .	3
25	The problem of double coincidence of wants arises when there is no medium of exchange. In such a case the buyer has to make a search for the seller who also wants to buy the same good which the buyer itself offers for exchange.	1½
	Money has solved the problem by working as a medium of exchange. The seller can sell the goods in the market in return for money and buy the goods he wants to buy in return for the money.	1½
26	Objectives : (1) Allocation of resources	
	(2) Reducing inequalities	
	(3) Bringing stability in the economy.	
	(4) Any other	4
	(Any one)	1
	Explanation	2
27	Sales = (v + ii - iv + i) - iii	2
	= 1300 + 80 - 60 + 700 - (-50)	1½
	= Rs. 2070  Lakh.	1/2
28	Banker to the government means that central bank gives the same banking facilities to the government which commercial banks give to the general public. The central bank does not give such facilities to the general public. The central bank keep accounts of government, gives them loans, works as agent in matters of collection	_
	of taxes, etc.	4

(ii) Saving is flow because it is measured during a period of time.  (iii) Gross domestic product is a flow because it is measured during a period of time.
