SENIOR SCHOOL CERTIFICATE EXAMINATION MARCH-2015

MARKING SCHEME – ECONOMICS (DELHI) (SET-II)

Expected Answers / Value Points

GENERAL INSTRUCTIONS:

- Please examine each part of a question carefully and then allocate the marks allotted for the part as given in the marking scheme below. TOTAL MARKS FOR ANY ANSWER MAY BE PUT IN A CIRCLE ON THE LEFT SIDE WHERE THE ANSWER ENDS.
- **2.** Expected suggested answers have been given in the Marking Scheme. To evaluate the answers the value points indicated in the marking scheme be followed.
- **3.** For questions asking the candidate to explain or define, the detailed explanation and definition have been indicated alongwith the value points.
- **4.** For mere arithmetical errors, there should be minimal deduction. Only ½ mark be deducted for such an error.
- 5. Wherever only two / three or a "given" number of examples / factors / points are expected only the first two / three or expected number should be read. The rest are irrelevant and must not be examined.
- **6.** There should be no effort at "moderation" of the marks by the evaluating teachers. The actual total marks obtained by the candidate may be of no concern to the evaluators.
- **7.** Higher order thinking ability questions are assessing student's understanding / analytical ability.

General Note: In case of numerical question no mark is to be given if only the final answer is given.

A2	Expected Answer / Value Points	Distribution of Marks
1	(d) Downward sloping straight line	1
2	$p_1 x_1 + p_2 x_2 \le m$	1
3	(a) Shifts to the right.	1
4	The measure of price elasticity of demand has a minus sign because there is inverse relation between price and demand of a normal good, while the measure of price elasticity of supply has plus sign because there is direct relation between price and supply of a good.	3

5	Good X	Good Y		
	(Units)	(Units)	MRT	
	0	8	<u>-</u>	11/
	1	6	2Y:1X	1½
	2	4	2Y:1X	
	3	2	2Y:1X	
	4	0	2Y:1X	
	Since MRT is	constant, P	P curve is downward sloping straight line.	1½

	good by the equilibrium PA (Or OQ ₁)	governmen price is OP ₁ while consu	refers to imposition of upper limit on the price of a t. For example, in the diagram OP is price ceiling while . At this price the producers are willing to supply only umers demand PB (Or OQ_2). The effect of the ceiling is AB (Q_1Q_2) , is created, which may further lead to black	2
	that can be o Maximum pi	means put charged by trice ceiling,	ting the upper limit by the government on the price the producers of a good from the buyers. is lower than equilibrium price, leads to rise in demand	1
	This may lea		reates shortage of the good in the market. narketing.	2
8	The feature no single sel	signifies tha ler is in a po its output.	at the number of sellers in the market is so large that esition to influence the price of the good on its own i.e. It is because the individual seller's share in the market	3

9	Cost in economics refers to the sum of actual money expenditure on inputs and the imputed expenditure in the form of inputs supplied by the owners including normal profit.	1			
	If MC < AVC , then AVC falls If MC = AVC, then AVC is constant	3			
	If MC > AVC, then AVC rises (Diagram not required)				
	OR				
	Revenue in Economics refers to the market value of output produced Or receipts from sale of output produced. If MR > AR, AR rises	1			
	If MR = AR, AR is constant	3			
	If MR < AR, AR Falls. (Diagram not required)				
10	Price Exp. Demand				
	5 60 12	11/2			
	4 60 15				
	$E_p = \frac{P}{Q} \times \frac{\Delta Q}{\Delta P}$ $= \frac{5}{12} \times \frac{3}{-1}$	1			
	$=\frac{5}{12}\times\frac{3}{-1}$	1			
	= -1.25	1/2			
	(No marks if only the final answer is given)				
11	- Given equilibrium, demand 'decreases.'				
	- Price remaining unchanged, excess supply emerges.				
	- Excess supply leads to competition among sellers causing price to fall.				
	- Fall in price causes rise (expansion) in demand and fall (contraction) in supply.	6			
	- The price continues to fall till the market is in equilibrium again at a lower price. (Diagram not required)				
12	The producer's equilibrium conditions are : (i) MC = MR and (ii) MC > MR after equilibrium.				
	Suppose MC > MR. In this situation it will be profitable for the firm to produce more or less depending upon relative changes in MC and MR till MC = MR. Suppose MC < MR. It will be profitable for the producer to produce more till MC = MR.				
	MC= MR is not a sufficient condition to ensure equilibrium. Given MC = MR, suppose the behaviour of MC and MR is such that if one more unit is produced. MC becomes less than MR.				
	Then in this case it will be profitable for the firm to produce more. Therefore, in this case though MC = MR the producer is not in equilibrium. However, if after MC = MR output MC becomes greater than MR, it will be most advantageous for the firm to produce only upto MC = MR.	3			
	(Diagram not required)				

Phase: I TP rises at increasing rate i.e. upto A in diagram.

MP rises i.e. upto 'a'

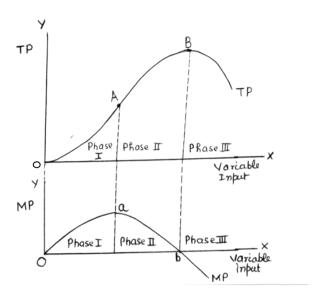

Phase: II TP rises at decreasing rate i.e. between A and B. MP falls and

remains positive between 'a' and 'b'.

Phase: III TP falls i.e. after B. MP falls and is negative i.e. after 'b'

1x3

3

(Diagram on single axis is also correct)

For blind Candidates Only:

Variable input (Units)	TP (Units)	MP (Units)	
1	6	6	
2	20	14	
3	32	12	Or any other
4	40	8	relevant
5	40	0	numerical example
6	37	-3	

Phases:

- (1) TP increases at increasing rate and MP rises upto 2 units.
- (2) TP increases at decreasing rate and MP falls but remains positive from 3 to 5 units.
- (3) TP falls and MP becomes negative from 6 unit onwards.

3

14	Given $Px = 3$, $Py = 3$ and $MRS = 3$, A consumer is said to be in equilibrium when	
	$MRS = \frac{P_x}{P_y}$	
	Substituting values we find that	
	$3 > \frac{3}{3}$	
	i.e. MRS > $\frac{P_x}{P_y}$	
	Therefore consumer is not in equilibrium.	3
	MRS > $\frac{P_x}{P_y}$ means that consumer is willing to pay more for one more unit of X as	
	compared to what market demands.	
	- The consumer will buy more units of X. - As a result MRS will fall due to the Law of Diminishing Marginal Utility - This will continue till MRS = $\frac{P_x}{P_y}$ and consumer is in equilibrium	3
	(Diagram not required)	
	OR	
	Given $P_x=4$, $P_y=5$ and $MU_x=5$, $MU_y=4$,a consumer will be in equilibrium when	
	$\frac{MU_x}{P_x} = \frac{MU_y}{P_y}$	
	Substituting values, we find that	3
	$\frac{5}{4} > \frac{4}{5} \text{ Or } \frac{MU_x}{P_x} > \frac{MU_y}{P_y}$	5
	Since per rupee MU_x is higher than per rupee MU_y , consumer is not in equilibrium.	
	The consumer will buy more of X and less of Y. As a result MU_x will fall and	
	MU_y will rise. The reaction will continue till $\frac{MU_x}{P_x}$ and $\frac{MU_y}{P_y}$ are equal and consumer is in equilibrium.	3

	<u>SECTION - B</u>	
15	(b) Fiscal deficit	1
16	Aggregate supply is the value of total quantity of final goods and services planned to be produced in an economy during a period.	1
17	(b) $\frac{1}{MPS}$	1
18	(a) Likely to rise	1
19	(c) Dividends	1

	Current Account.	
	Sale of machinery to abroad brings in foreign exchange and thus recorded on the credit side.	1½
	(No marks if the reasons are not given)	
21	$Real GDP = \frac{Nominal GDP}{Price Index} \times 100$	1½
	$Real\ GDP = \frac{1200}{120} \times 100$	1
	= Rs. 1000	1/2
	(No marks if only the final answer is given)	
22	(1) Borrowings from and to abroad(2) Investments from and to abroad.(3) Decreases and increases in foreign exchange reserves.	1x3
	OR	
	 (1) Exports and imports of goods (2) Exports and imports of services (3) Factor income receipts from abroad and payments to abroad. (4) Transfers from and to abroad. (Any Three) 	1x3
23	$Y = \bar{C} + MPC(Y) + I$	1½
	$1000 = \bar{C} + 0.8(1000) + 100$	2
	$\bar{C} = 1000 - 800 - 100 = 100$	1/2
	(No marks if only the final answer is given)	
24	The central bank is the sole authority for the issue of currency in the country. It promotes efficiency in the financial system. Firstly, because it leads to uniformity in the issue of currency, Secondly, because it gives Central Bank control over money supply.	4
	OR	
	The Central Bank acts as a banker to the government. The central bank accepts receipts and makes payments for the government and carries out exchange, remittance and other normal banking operations for the government. The central bank manages public debt and also lends to government.	4
	(To be marked as a whole)	
25	 Opening more bank accounts means more bank deposits. More deposits means increase in the lending capacity of the commercial banks. More lending by banks means more investment in the country. More investment means more national income. 	4

26	Government can influence allocation of resources by influencing market mechanism through taxes, subsidies and direct participation in production. Heavy taxes can be imposed on production units engaged in producing harmful products like liquor, cigarettes etc. Tax concessions and subsidies can be given to encourage production of products useful for the masses. Government can directly produce goods and services normally ignored by the private sector due to lack of enough profits. (To be marked as a whole)	6
27	(i) Payment of fees to chartered accountant by a firm is intermediate cost	2
	to the firm and, therefore not included. (ii) Payment of corporate tax by a firm is a transfer payment and thus not	2
	included. (iii) Purchase of a refrigerator by a firm for own use is investment expenditure and thus included. (No marks if reason is not given)	2
28	The Inflationary Gap is the amount by which the aggregate demand exceeds aggregate supply at the full employment level. It is called inflationary because it leads to rise in price level.	2
	Repo Rate is the rate of interest at which central bank lends to commercial banks for a short period. When central bank raises Repo Rate, the borrowings by the commercial banks become costly. This forces the commercial banks to raise their lending rates. People borrow less, and therefore spend less. This helps in reducing inflationary gap.	4
	(Diagram not required)	
	OR	
	<u>Deflationary Gap</u> is the amount by which the aggregate demand falls short of aggregate supply at the full employment level. It is called deflationary because it leads to a fall in price level. (Diagram not required)	2
	Open Market Operations refer to buying and selling of government securities by the central bank in the open market. Central bank can reduce deflationary gap by buying securities. Those who sell receive payments by cheques from the central bank. The money flows out from Central bank into the commercial banks. This raises lending capacity of commercial banks. Banks lend more. Spending rises which reduces deflationary gap.	4
29	$GNP_{mp} = viii + (i + vi) + vii + xii + iv + (v - ix) + x + xi$	1½
	= 500 + 100 + 20 + 110 + 200 + 600 + (140 - 120) + (-10) + 150	1
	= <i>Rs</i> . 1690 Crore	1/2
	$NNDI = GNP_{mp} - (v - ix) - ii$	1½
	$NNDI = GNP_{mp} - (v - ix) - ii$ $= 1690 - (140 - 120) - 30$	1½ 1
