

**Marking Scheme**  
**Class X Session 2023-24**  
**MATHEMATICS STANDARD (Code No.041)**

TIME: 3 hours

MAX.MARKS: 80

<b>SECTION A</b>		
Section A consists of 20 questions of 1 mark each.		
1.	(b) $xy^2$	1
2.	(b) 1 zero and the zero is '3'	1
3.	(b) $\frac{a_1}{a_2} = \frac{b_1}{b_2} \neq \frac{c_1}{c_2}$	1
4.	(c) 2 distinct real roots	1
5.	(c) 7	1
6.	(a) 1:2	1
7.	(d) infinitely many	1
8.	(b) $\frac{ac}{b+c}$	1
9.	(b) $100^\circ$	1
10.	(d) 11 cm	1
11.	(c) $\frac{\sqrt{b^2 - a^2}}{b}$	1
12.	(d) $\cos A$	1
13.	(a) $60^\circ$	1
14.	(a) 2 units	1
15.	(a) 10m	1
16.	(b) $\frac{4-\pi}{4}$	1
17.	(b) $\frac{22}{46}$	1
18.	(d) 150	1
19.	(a) Both assertion (A) and reason (R) are true and reason (R) is the correct explanation of assertion (A)	1
20.	(c) Assertion (A) is true but reason (R) is false.	1
<b>SECTION B</b>		
Section B consists of 5 questions of 2 marks each.		
21.	<p>Let us assume, to the contrary, that <math>\sqrt{2}</math> is rational.            So, we can find integers <math>a</math> and <math>b</math> such that <math>\sqrt{2} = \frac{a}{b}</math> where <math>a</math> and <math>b</math> are coprime.            So, <math>b\sqrt{2} = a</math>.            Squaring both sides,            we get <math>2b^2 = a^2</math>.            Therefore, 2 divides <math>a^2</math> and so 2 divides <math>a</math>.            So, we can write <math>a = 2c</math> for some integer <math>c</math>.            Substituting for <math>a</math>, we get <math>2b^2 = 4c^2</math>, that is, <math>b^2 = 2c^2</math>.            This means that 2 divides <math>b^2</math>, and so 2 divides <math>b</math>.            Therefore, <math>a</math> and <math>b</math> have at least 2 as a common factor.            But this contradicts the fact that <math>a</math> and <math>b</math> have no common factors other than 1.            This contradiction has arisen because of our incorrect assumption that <math>\sqrt{2}</math> is rational.            So, we conclude that <math>\sqrt{2}</math> is irrational.</p>	<p><math>\frac{1}{2}</math></p> <p><math>\frac{1}{2}</math></p> <p><math>\frac{1}{2}</math></p> <p><math>\frac{1}{2}</math></p>

22.	<p>ABCD is a parallelogram.  <math>AB = DC = a</math>                      Point P divides AB in the ratio 2:3  <math>AP = \frac{2}{5}a</math>, <math>BP = \frac{3}{5}a</math>                      point Q divides DC in the ratio 4:1.  <math>DQ = \frac{4}{5}a</math>, <math>CQ = \frac{1}{5}a</math>  <math>\Delta APO \sim \Delta CQO</math> [AA similarity]  <math>\frac{AP}{CQ} = \frac{PO}{QO} = \frac{AO}{CO}</math>  <math>\frac{AO}{CO} = \frac{\frac{2}{5}a}{\frac{1}{5}a} = \frac{2}{1} \Rightarrow OC = \frac{1}{2}OA</math></p>		<p><math>\frac{1}{2}</math> <math>\frac{1}{2}</math> <math>\frac{1}{2}</math> <math>\frac{1}{2}</math></p>
23.	<p><math>PA = PB</math>; <math>CA = CE</math>; <math>DE = DB</math> [Tangents to a circle]                      Perimeter of <math>\Delta PCD = PC + CD + PD</math>  <math>= PC + CE + ED + PD</math>  <math>= PC + CA + BD + PD</math>  <math>= PA + PB</math>                      Perimeter of <math>\Delta PCD = PA + PA = 2PA = 2(10) = 20</math>                      cm</p>		<p><math>\frac{1}{2}</math> <math>\frac{1}{2}</math> <math>\frac{1}{2}</math> <math>\frac{1}{2}</math></p>
24.	<p><math>\because \tan(A + B) = \sqrt{3} \quad \therefore A + B = 60^\circ \quad \dots(1)</math>  <math>\because \tan(A - B) = \frac{1}{\sqrt{3}} \quad \therefore A - B = 30^\circ \quad \dots(2)</math>                      Adding (1) &amp; (2), we get <math>2A = 90^\circ \Rightarrow A = 45^\circ</math>                      Also (1) - (2), we get <math>2B = 30^\circ \Rightarrow B = 15^\circ</math></p>	<p>[or]</p>	<p><math>\frac{1}{2}</math> <math>\frac{1}{2}</math> <math>\frac{1}{2}</math> <math>\frac{1}{2}</math></p>

Radius of the cylindrical tent ( $r$ ) = 14 m  
 Total height of the tent = 13.5 m  
 Height of the cylinder = 3 m  
 Height of the Conical part = 10.5 m  
 Slant height of the cone ( $l$ ) =  $\sqrt{h^2 + r^2}$   
 $= \sqrt{(10.5)^2 + (14)^2}$   
 $= \sqrt{110.25 + 196}$   
 $= \sqrt{306.25} = 17.5$  m

Curved surface area of cylindrical portion  
 $= 2\pi rh$   
 $= 2 \times \frac{22}{7} \times 14 \times 3$   
 $= 264 \text{ m}^2$

Curved surface area of conical portion  
 $= \pi rl$   
 $= \frac{22}{7} \times 14 \times 17.5$   
 $= 770 \text{ m}^2$

Total curved surface area =  $264 \text{ m}^2 + 770 \text{ m}^2 = 1034 \text{ m}^2$   
 Provision for stitching and wastage =  $26 \text{ m}^2$   
 Area of canvas to be purchased =  $1060 \text{ m}^2$   
 Cost of canvas = Rate  $\times$  Surface area  
 $= 500 \times 1060 = ₹ 5,30,000/-$

35.

Marks obtained	Number of students	Cumulative frequency
20 - 30	p	p
30 - 40	15	p + 15
40 - 50	25	p + 40
50 - 60	20	p + 60
60 - 70	q	p + q + 60
70 - 80	8	p + q + 68
80 - 90	10	p + q + 78
	90	

$p + q + 78 = 90$   
 $p + q = 12$

Median =  $(l) + \frac{\frac{n}{2} - c}{f} \cdot h$   
 $50 = 50 + \frac{45 - (p + 40)}{20} \cdot 10$   
 $\frac{45 - (p + 40)}{20} \cdot 10 = 0$   
 $45 - (p + 40) = 0$   
 $P = 5$   
 $5 + q = 12$   
 $q = 7$

Mode =  $l + \frac{f_1 - f_0}{2f_1 - f_0 - f_2} \cdot h$

	$= 40 + \frac{25-15}{2(25)-15-20} \cdot 10$ $= 40 + \frac{100}{15} = 40 + 6.67 = 46.67$	
	<b>SECTION E</b>	
36.	(i) Number of throws during camp. $a = 40$ ; $d = 12$ $t_{11} = a + 10d$ $= 40 + 10 \times 12$ $= 160$ throws	1
	(ii) $a = 7.56$ m; $d = 9$ cm = 0.09 m $n = 6$ weeks $t_n = a + (n-1)d$ $= 7.56 + 6(0.09)$ $= 7.56 + 0.54$ Sanjitha's throw distance at the end of 6 weeks = 8.1 m (or) $a = 7.56$ m; $d = 9$ cm = 0.09 m $t_n = 11.16$ m $t_n = a + (n-1)d$ $11.16 = 7.56 + (n-1)(0.09)$ $3.6 = (n-1)(0.09)$ $n-1 = \frac{3.6}{0.09} = 40$ $n = 41$ Sanjitha's will be able to throw 11.16 m in 41 weeks.	$\frac{1}{2}$ $\frac{1}{2}$ $\frac{1}{2}$ $\frac{1}{2}$ $\frac{1}{2}$ $\frac{1}{2}$
	(iii) $a = 40$ ; $d = 12$ ; $n = 15$ $S_n = \frac{n}{2} [2a + (n-1)d]$ $S_n = \frac{15}{2} [2(40) + (15-1)(12)]$ $= \frac{15}{2} [80 + 168]$ $= \frac{15}{2} [248] = 1860$ throws	$\frac{1}{2}$ $\frac{1}{2}$
37.	(i) Let D be (a,b), then Mid point of AC = Midpoint of BD $\left(\frac{1+6}{2}, \frac{2+6}{2}\right) = \left(\frac{4+a}{2}, \frac{3+b}{2}\right)$ $4 + a = 7$ $3 + b = 8$ $a = 3$ $b = 5$ Central midfielder is at (3,5)	$\frac{1}{2}$ $\frac{1}{2}$
